Writing and research

Academic Writing, Publishing and Presenting

One week
£900

As science is becoming truly international, researchers are faced with challenges of publishing in established international journals, and adhering to international research and ethical standards. Developing a strong publication and citation track-record is a major challenge for all scientists. This intensive course is designed to develop your academic writing, publishing, oral presenting and science communication skills.

The course is administered through seminars, workshops and practical exercises, and includes the following six modules:

- Academic writing
- Publishing in international journals
- International co-authoring and grant applications
- Oral conference presentation
- Public speaking and presenting to non-expert audiences
- British cultural studies

Advanced Psychological Research

One week
£850

The Advanced Psychological Research course is designed to provide you with a wide range of skills necessary for conducting psychological research of international quality. It is particularly suitable for psychology and education students and academics who want to develop their research skills and to gain expertise in international research standards. The course provides hands-on research experience and supervision from the leading interdisciplinary researchers.

The course includes the following six modules:

- Current Issues in Psychology
- Research Methods
- Data Analysis and Interpretation
- Ethical Standards and Approval Procedures
- Student-Tailored Research Experience
- British Cultural Studies

You can also sign up for both of the courses listed above:

Two weeks
£1,840

Student insight

Yulia Kutuzova, Academic Writing, Publication and Presenting and Advanced Psychological Research

"I enjoyed the courses. Firstly, they were really intensive and if you want to make the most of a week or two on holidays and study hard you won't be disappointed. Secondly, they were varied and with such experienced lecturers as we had there was no chance to get bored. Finally, they were useful and I'm sure I'll apply the knowledge and skills I got there to my future research. Studying in an international environment and learning about London and the UK was also a part of the unforgettable experience."

Business and Law

With business becoming increasingly globalised and competitive, applications of law and psychology to international business, as well as developed advocacy skills, are of utmost importance. The course is particularly suited to law and business students, legal and business practitioners, and everyone with an interest in international business.

Our International Business and Law courses are practice-oriented and are designed to equip you with practical knowledge of the laws of international business, including international contracts, international commercial litigation and cross-border commercial finance (asset-based lending); advocacy skills — court room, arbitration and written; as well as good knowledge of international commercial arbitration. The courses also touch on US commercial laws. They are enriched with psychological insights (occupational psychology) and knowledge of the British culture, to best develop your ability to successfully conduct business internationally.

Student insight

Evgeniya Pashuk,

International Business and Law
"I found the course very interesting and useful. The tutor reading the course, Fatos Selita, is a great lecturer — a real specialist. One of the most fascinating experiences I had was attending trials in London courts. I learned a lot about international law. The skills I obtained during the course will help me in my study and work. I am sure. I also liked Goldsmiths, its campus and London itself."

International Business and Law I

One week
£1,100

- Provides you with a solid foundation of various aspects of international business law focusing on international contracts (including negotiations); the International Sale of Goods; international dispute resolution (court); and UK legal systems
- Introduces you to commercial finance — cross-border asset-based lending
- Gives you an introduction to relevant occupational psychology topics
- Gives you training in job applications and other aspects of career development
- Provides an in-depth insight into many aspects of British culture

International Business and Law II

One week
£1,000

- Gives you a solid foundation in important elements of international business laws focusing on international dispute resolution (arbitration); Uniform Commercial Code; conflict of laws; commercial arbitration; and US legal systems
- Equips you with advocacy skills (oral and written) as applied in UK courts and international arbitration
- Introduces you to different relevant occupational psychology topics (different to those covered in the International Business and Law I course)
- Gives you in-depth insights into multiple aspects of British culture
- Provides training in job interviews and other aspects of career development

You can also sign up for both of the courses listed above:

Two weeks
£2,100

Goldsmiths, InLab and IBL

These courses are run by Goldsmiths with InLab and IBL. They collaborate on a wide range of activities, combining scientific and legal expertise to enable successful scientific exchange and science dissemination. We believe that successful collaborations and communication of scientific knowledge can lead to greater and faster progress.

More about Goldsmiths

Goldsmiths, University of London has always nurtured the best and the brightest minds – we are ranked 9th in the UK for world-leading 4* research (Research Assessment Excellence). We have over 10,000 students and a thriving international community, with students from 114 countries. We provide a welcoming and broad-minded environment for studying in London. Our friendly campus is in New Cross, which is about 10 minutes by train from the city centre.

More about InLab (International Laboratory for Interdisciplinary Investigations into Individual Differences in Learning)

InLab conducts research into genetic and environmental processes underscoring individual differences in learning, motivation and achievement. We use different methods – including cross-cultural studies, experimental psychology, twin studies, molecular genetics and neuroscience – with the aim of improving education.

InLab is a member of INRiCHD (International Network for Research in Child Health and Development), which links many leading laboratories across the world.

More about IBL (International Business and Law Consultancy)

IBL provides business and legal advice for individuals and businesses, directly from experts. It also specialises in the areas of scientific exchange and globalisation, including facilitating scientific collaborations and establishing links between international research groups and universities.

IBL collaborates with InLab to support the work of the Council on Ethical, Societal and Legal Implications of Genetic Research in Child Development and Education. IBL specialists provide training in advocacy skills to students and scientists to enable successful science communication.
